

HCRCC - AT THE FLYING FIELD

September 16, 2010

Both Tuesday and Thursday of this week were made for pure RC flying. Cool mornings, warm late morning and afternoon temps and calm to low breezes made these September days flying days to remember. Vic, Murph, Rousseau and Jim Brooks mowed the grass Monday and reseeded the bare spots in the infield. JRM

Jim Brooks had to bring out the old reliable sail plane with these ideal sailplane conditions. Seen here launching one of his powered sailplanes he set it up for a pleasing flight.

The morning would not be so kind to Brooks as later in the morning, while enjoying another great flight in his clipped wing 1/4 scale Cub, he lost the Cub in the sun and before he could regain control it got really ugly. A couple of his flying Buds helped him gather the remains in a trash bag. Not a pretty sight. Soooooo sorry Jim!

Both Tues. & Thurs. found the Geezers taking advantage of the great weather. Murphy was there with the SpaceWalker and the 1/3 scale Cub and both found the clear skies conducive to great smoke patterns.

Other Geezers in action found Dick Rousseau reseeding the bare spots with some more user friendly grass seed and making sure the ground was wet enough to encourage germination. Dick also removed the shrub growing around the wind sock making it look more like a flying field rather than a tree farm. Thanks Rousseau. Geezer power on the move

Right.... Rousseau demonstrates a short field takeoff with his new electric flight flier. Impressive!

Left, Joe Brett taxing out for another flight in the great September air.

Come on out, the weather is just wonderful!
